LED screen indicating charging speed, time and energy transferred

Meets international & Australian standards

Auto charge recovery

Overcurrent protection

Warranty: 2 Years

Operating Temperature: -25°C to +55°C

How to Operate

How To Start Normal Charge

1. Firmly insert the power plug into outlet. Ensure the socket is rated to a current of 10Amp. The Power Green LED light will illuminate
2. Remove cap & insert the vehicle connector into your vehicle inlet. Ensure the plug is fully seated into the vehicle. The Green LED will illuminate
3. The device starts charging automatically when the green LED light starts to blink.

How To Stop Normal Charge

1. Disconnect the charging plug from the vehicle
2. Close protective cap of the EV charger plug
3. Disconnect power plug from the outlet
